

DEPARTMENT OF INFORMATION TECHNOLOGY, NITK SURATHKAL

V Sem IT – WTA Lab [IT302]

ASSIGNMENT

1. Based on the application chosen finish all components related to HTML and CSS (Proper layout, background, menus etc)
2. Create minimum of three(3) forms in your application (example: Login form, Signup form, form for few calculations to be carried out according to your application)
3. Validate each forms (using javascript all the fields are to be validated properly)
4. Perform Event handling for the respective forms(example: when submit is clicked an alert of welcome or login successful).
5. Display at least one dynamic value representation in your application (like time and date display).

Examples: (create according to your application)

The first example shows a login form with the following fields and elements:

- USER NAME: (highlighted in red with 'invalid' text next to it)
- PASSWORD:
- LOGIN button

The second example shows a calculation form with the following fields and elements:

- How much was your bill?:
- How was your service?:
- How many people are sharing the bill?: people
- CALCULATE! button

Note: This will be evaluated at the end of this lab.
